

Softa-Man[®]

Indicated for Hygiene and Surgical Hand Disinfection

Recommended for routine MRSA prophylaxis

Gentle Hand Disinfectant with Natural
Extracts - effective within 30 seconds

Softa-Man®

Indicated for Hygiene and Surgical Hand Disinfection

Characteristics

Softa-Man® is a hand disinfectant which is particularly gentle on the skin and is noted for its allergen-free properties.

The combination of ethanol, with its significant virus inactivating properties, and 1-propanol, with its strong bactericidal and fungicidal action, ensures that the product's full range of action is deployed and that any transient and resident bacterial flora are destroyed. Because of its remarkable efficacy against multiresistant staphylococci, Softa-Man® is particularly recommended in MRSA prophylaxis.

High quality skin care substances such as panthenol (provitamin B5), bisabolol (an anti-inflammatory active ingredient in camomile) and allantoin, give the skin long lasting protection.

Properties

Softa-Man® is

- based on a combination of active ingredients consisting of alcohols
- registered with the DGHM and RKI **
- free of other active ingredients and therefore particularly well-tolerated
- free of artificial colorants
- has allergen-free fragrance

Indications

Surgical and hygienic hand disinfection

The selected alcohols demonstrate a short term and prolonged activity (3 hours) making Softa-Man® suitable for hygienic and surgical hand disinfection.

Active substances

The combination of ethanol with a broad virus inactivating effect and 1-propanol, which has a high bactericidal and fungicidal effect, contributes to Softa-Man®'s wide range of effectiveness.

The rapid activity and penetrating effect of alcohols fulfil all the demands of instant and prolonged skin disinfection.

Instruction for Use

Hygienic hand disinfection:

Rub 3 ml of undiluted solution into the hands for 30 seconds until dry.

Effective disinfection against MRSA is achieved within 30 seconds.

Surgical hand disinfection:

Apply at least 2 x 5 ml of solution to the hands and forearms and rub in during 3 minutes.

Antiviral action:

HIV ·	30 s
Rotavirus ·	30 s
Herpes Simplex virus ·	30 s
Vaccinia virus ·	30 s
HBV (HBsAg test) ·	2 min
HBV (MAD test) ·	5 min
HCV (BVDV) ·	30 s
Adenovirus ·	2 min
Norwalk-like-viruses ·	≥1 min

·Suspension tests using the BGA/DVV methods

- Hygienic and Surgical hand disinfection by the German Society for Hygiene and Microbiology (DGHM)
- Robert Koch-Institut (RKI) for hygienic hand disinfection

Unit of sale

Softa-Man®	
Bottle	100 ml
Bottle	500 ml
Bottle	1000 ml
Canister	5 l

Physicochemical data

Density (20° C): 0.859 g/ml

Refractive index (20° C): 1.3675

Softa-Man®

Active Ingredients:

100 ml solution contains:	
Ethanol	45,0 g
1-Propanol	18,0 g

Excipients:

Purified Water, Disopropyl Adipate, PEG-6-Capriyl/Capric glycerides, Dexpanthenol, Bis-abolol, Perfume, Allantoine, C.I. 47005.

Indications:

Hygienic and surgical hand disinfection

Instructions for use:

Apply 3 ml solution to hands and rub for 30 seconds until the hands are dry.

Surgical hand disinfection:

Apply 2x5 ml solution undiluted into the hands during 3 minutes.

Hepatitis-B-prophylaxis:

Rub 5 ml solution evenly into dry hands for 5 minutes until dry. Softa-Man® should not be used after the date of expiry on the label.

Safety note:

Highly flammable! Keep container tightly closed. Keep away from sources of ignition. No smoking. Do not spray into open flame!

Keep out of reach of children.
